

KLUDI Fittings for the kitchen

● KLUDI ●

KLUDI fittings – quality of life every day

Fittings accompany us throughout our daily routines. We come into contact with them all the time in the bathroom and kitchen. This gives rise to certain wishes and expectations for form and function. KLUDI understands these requirements – and implements them in products that are perfectly finished and that combine timeless design, innovative technology and superior-quality materials. This is how we create mixers and showers that are more than just regulated water conductors – they represent a certain quality of life.

We also set store by this closeness to people in our company. In numerous countries throughout the world, KLUDI's employees take personal care of requests from our customers and partners. They know: they can rely on KLUDI – and can expect a lot more in future.

As a manufacturer of fittings, we are conscious of our responsibility to be more economical in our use of water. Environmentally friendly production methods and smart use of resources are therefore a long-term obligation for us. With KLUDI Eco, we implement this promise with products that save water – for the future of our planet.

Using water when you actually need it

The kitchen has a special role in every home – it is at the centre of life for every person. This is where mixing, chopping, washing, cooking, baking and rinsing take place. Both family and social life within your own four walls are centred here: work and leisure, entertainment and relaxation, indulgence and enjoyment, routine and celebrations. And always at the centre: the watering point with the kitchen fitting.

The convenience offered today by a modern kitchen mixer from KLUDI was unimaginable for earlier generations. And it still is for many people today: raise the lever and the water starts to flow – in its finest and purest form, in the right quantity and at the right temperature. The most important substance in human life is thus always available in unlimited quantities and in the best quality. For drinking, cleaning, washing up, quenching, washing hands or cooking.

Even if we do take the operation of a KLUDI kitchen mixer for granted, now and again it's still worthwhile considering the supreme efficiency that this functional unit delivers day in day out.

Kitchen mixers have to perform their job reliably in the tough daily routine of the kitchen; they have to withstand blows, collisions with heavy saucepans, spills of hot liquids and impatient and hence not particularly gentle cooks. In a four-person family, the kitchen mixer is turned on around 90 times every day. Switching between almost boiling and cold water puts every mixer system and every material to a tough test.

Nonetheless, kitchen mixers can be operated with your little finger, they swivel smoothly and can be pulled out conveniently. Their interior and their finishes meet the highest standards of hygiene. And there is room to fit almost anything that needs to be filled under their tall spout.

This is the compulsory part – and every KLUDI mixer will of course satisfy this obligation. So that water is available in every kitchen when it is needed.

Learn more about the options and the high art of kitchen mixers overleaf.

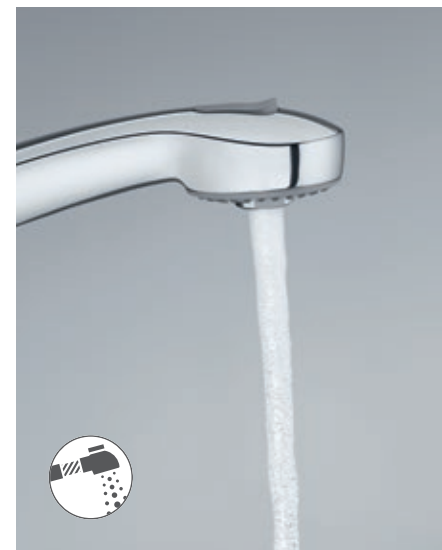

The high art of the kitchen fittings

Kitchen mixers from KLUDI can do more and provide more – because KLUDI is an expert for kitchen fittings. It is the details that set these mixers apart – in terms of material, finish, functionality, design and innovation.

Sensor mixers

How often don't you have free hands? How often is it necessary to wash dirty hands or sandy lettuce? It's hard enough to get the water running under these circumstances, without needing to carry out a thorough cleaning of the sink unit afterwards. KLUDI's sensor technology is the key to non-contact use of water at the sink. It is intelligent and avoids making mistakes. One movement in the detection field of the sensor eye is all it takes to start the water running. Power is supplied by a long-lasting, standard commercial battery or by the 230 V mains supply. That isn't just extremely convenient, avoiding constant polishing afterwards, but it will impress your guests when the host or amateur chef controls the high-tech watering point as if by magic.

Retracting sprayer

When you want to wash up pots and pans, an adjustable rinsing spray is a practical helper. There's usually a button for switching over: the intense mode is used for filling and soaking; the aerator spray mode for removing the remains of food and for rinsing off surfaces.

Bayonet fitting

Having the kitchen units face the window represents real quality of life – including a view while washing dishes or preparing food. However, the kitchen mixer has often been in the way when you want to open one side of the window or when you need to clean it. No problem thanks to the imaginative developers at KLUDI. They invented the bayonet fitting for the sink mixer: lift it out, turn it on its side – done. Then you can open the window without anything in the way.

Retracting spout

Flexibility is everything – for kitchen fittings too. A retractable spout increases the radius of the mixer, makes it easier to clean the sink unit and to fill containers that are not in the sink or that don't fit under the spout. Incidentally, only the very best quality from KLUDI's own production is used for the retractable KLUDI hoses. A well-balanced system of counterweights helps the hose slide back smoothly into position so that it is safely stored out of the way in the curve of the spout.

KLUDI VersatilityPlus

Kitchen mixers with a high spout are very popular among professional cooks and aspiring amateur chefs. There are good reasons for this, as the mixers are given a lofty and elegant appearance by their generous size and enhance the looks of the sink unit. On top of that, they offer practical room to manoeuvre when working – since tall receptacles such as large saucepans, watering cans or vases can just be placed under the spout and filled conveniently. Especially practical: the spout on the KLUDI mixer can simply be swivelled to one side so there is nothing in the way when putting receptacles into the sink or taking them out.

Manual and electronic operation

And another real innovation: KLUDI E-GO is the first kitchen fitting that can be operated manually and electronically. Contact-free operation by means of a sensor is a particular advantage when both hands are full. The fitting can also be controlled manually at any time as required. So it is no wonder that KLUDI E-GO was awarded the coveted PLUS X AWARD for Design and Ease of Use.

Multi-connector

Turned off the gas stove? Switched the iron off? With the multi-connector, KLUDI does its part in helping to take the weight off your mind when you go on holiday. The small valve at the base of the mixer turns the water off in the kitchen for the dishwasher or washing machine – signalling the end of rummaging around under the sink. Defining convenience is this easy and intelligent. One quick turn and the holiday or weekend trip can start and end without trouble, since the water is safely shut off.

Fittings for boiler and electronical heater

KLUDI supplies so-called low-pressure versions for many kitchen fittings. In kitchens that are a long way from the central hot water supply, small boilers under the sink are often used. Where an unvented boiler is concerned, which can be operated with the normal 230 V mains supply, a special mixer is required – a low-pressure mixer. The advantage of the low-pressure version: hot water is provided on the spot through a short line as needed – the technical equipment is tried and tested and affordable.

NEW

Quick connector

KLUDI has introduced its quick connector so that KLUDI kitchen mixer taps can be installed fast and safely. The hose end piece from the retractable spout or retractable sprayer slots onto the matching adapter on the mixer body with a single click. This saves time and expense in installation, as there is no longer any need for complicated checks for tightness since this system already guarantees the tightness of the connection in the factory.

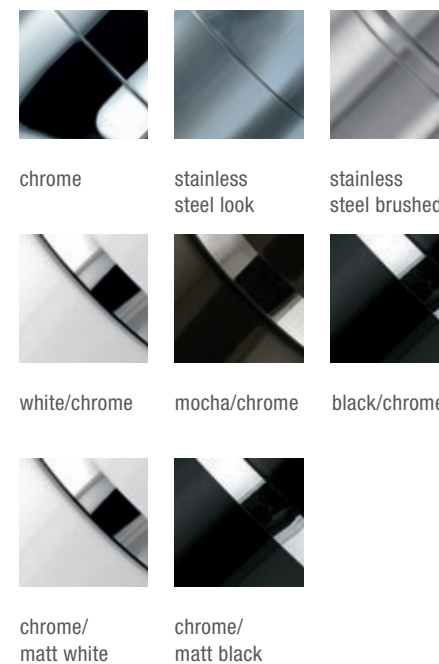

Swing & Stop

This function was specially developed for the KLUDI NEW WAVES range. A closing mechanism in the base of the fitting allows running water to be turned off by simply swivelling the spout to one side using the elbow. When the spout is swivelled back, the water will start running again.

Material, finishes and colours

KLUDI fittings are made exclusively of brass, which complies with the most stringent standards in the German drinking water regulations. Drinking water from KLUDI fittings is thus totally safe for your health. As the expert for kitchen mixer, KLUDI moves with the times and offers various finishes that are in tune with current kitchen fashions. Apart from easy-care chrome, this also means brushed high-grade steel and high-grade steel finishes or lacquered versions in different colours such as white, black or mocha. Every KLUDI fitting finish is permanently hard-faced and thus well equipped for a long life in the kitchen.

KLUDI ADLON

The fascination of luxury

The superior details are what make KLUDI ADLON so prized. Richly ornamented and skilfully crafted, the splendid kitchen mixer retains turn-of-the-century charm. Nostalgic flair is combined with modern technology.

sink mixer DN 8
516060520

Craftsmanship skills

Classic, cross-head handles, porcelain inlays and a spout with elaborate, hexagonal faceting reflect supreme craftsmanship. KLUDI ADLON is well entitled to its prestigious name. Elegance that satisfies exacting standards, which can be shown to advantage as much in stylish art deco villas as in smart designer kitchens in a skilful mix of styles.

JOOP!

Sheer opulence

multifunction-fitting DN 10
559040575

Emotional.
Opulent. JOOP!
The elegant
multifunction
mixer adds a
touch of glamour
to the kitchen
and looks sen-
sational with its
strong presence.

Manufactured from one piece in a complex process

This exceptional kitchen mixer was created in collaboration with Joop!, the internationally renowned designer label. It combines everything that sets JOOP! apart: opulence, emotional appeal and an inimitable presence.

The multifunction mixer is convenient to use thanks to the spout with 360° swivel motion and a side operating lever. The spout is produced in a complex process, it is made entirely in one piece. The opulence of the JOOP! mixer is shown to particular advantage in large, open-plan kitchens.

KLUDI E-GO

Our most intelligent kitchen fitting

May we present: probably the most advanced kitchen mixer in the world, brought to you by KLUDI: E-GO. This sink mixer is a perfect symbiosis of functionality, high-tech and design. As a hybrid, it is just as easy to operate manually as in automatic mode. However, there's no need for users to concern themselves with all that, because KLUDI E-GO operates entirely intuitively and without operating instructions.

Water – how and when it is used

KLUDI E-GO is the much sought-after ‘third hand’ that is needed so often in the kitchen. The solution: an intelligent infrared system causes the water to run when it’s needed – even if you don’t have a hand free, if your fingers are dirty or you need to wash sandy lettuce. And if greater individuality is called for: thanks to the side mixer lever, it can all be regulated by hand too, with precise flow and accurate temperatures.

3-phase automatic operation:

The 3-phase automatic function is achieved by using two infrared fields: the activation field and the operating field. The infrared sensor for both is fitted in the base of the mixer.

Phase 1: turning the water on

When the user moves their hands into the activation field – it is five centimetres in front of the infrared sensor – then the mixer turns the water flow on automatically. At the same time, the radius of the infrared sensor is extended to 20 centimetres; the operating field becomes active.

2nd phase: using water

The water will run for as long as you’re washing and working. The presence of an object within the operating field ensures that the water isn’t turned off. However, if no hand or object is detected within the operating field, then the water will stop running and the mixer will switch back to the activation field. Moving your hand or a saucepan, for instance, within the activation field, immediately in front of the infrared sensor, will turn the water back on.

3rd phase: working without water – shut-off

KLUDI E-GO is intelligent: if the sensor doesn’t detect hands or objects in the operating field for three seconds, the water is turned off. This can be used specifically when working without need for water, as hand movement or moving saucepans and sieves at the sink do not activate the flow of water. The water can only be turned on again via the activation field – five centimetres in front of the mixer.

Conventional hand operation

The side controls work as usual: the flow of water and temperature can be adjusted precisely.

Double-arch spout: KLUDI E-GO with expanded work radius

Kludi has combined the E-GO kitchen mixer with the one-of-a-kind double-arch spout. This makes the intelligent E-GO functions even more versatile to use. Regardless of whether the hose spray has a fixed radius or is used by hand: simply take the sprayer out of the holder and move it in any direction – for example, to rinse crockery or to fill watering cans and buckets.

What is more, you can use the mixer, which has won several design prizes, with the same innovative functions as the classic KLUDI E-GO: automatic or manual operation is possible.

The flexible white hose spout is easy to remove using the plastic handle and provides a maximum reach of 360° for working.

KLUDI NEW WAVES

Crisp purist lines

KLUDI NEW WAVES focusses on the essential: the geometric form. Two cylinders, at a dynamic angle to each other, characterise the line's purist design. The handle is integrated in the basic form. KLUDI NEW WAVES sets a striking example of fine design.

KLUDI Swing & Stop: turn off the single-lever mixer with your elbow

KLUDI NEW WAVES impresses with a practical extra: the KLUDI Swing & Stop function. This means the single-lever mixer can be turned off by pushing the swivelling spout sideways using your elbow. If, for instance, you are holding a heavy saucepan with both hands, KLUDI Swing & Stop proves extremely useful and it saves water too.

The handle is integrated in the mixer body. Tipping it backwards slightly will turn on the flow of water.

Simply twist the handle to regulate the temperature.

KLUDI Swing & Stop: just push the spout to the side with your elbow and the water flow stops immediately – a useful function when you don't have a hand free.

KLUDI TANGENTA

The sheer elegance
of high-grade steel

Consummate quality is achieved when no compromises are made. KLUDI TANGENTA pursues this strategy. The single-lever sink mixer are made of 100 % high-grade steel with an exceptional, finely brushed finish. Their solid composition makes them long-lasting and hard wearing. The purist mixers prove themselves as highly practical tools for the kitchen while at the same time emanating an unsurpassed feeling of premium value. Only high-grade steel has this understated elegance, showing kitchens off in a whole new light.

Solid quality, an exquisite appearance

The superior high-grade steel and high-end workmanship form a perfect match for each other in KLUDI TANGENTA. The mixer body consists of one piece of solid high-grade steel; the components are incorporated seamlessly with the body. Then it is only to be expected that the single-lever mixer is mounted right on the sink unit. The entire mixer body can be swivelled through 360° using a built-in mechanism.

The slim spout and the delicate-seeming lever form one homogeneous unit with the slender body. The brushed steel surface lends the mixers an understated, matt appearance. Thanks to their very fine structure, the kitchen mixers are easy to clean and remain hygienic and spotless.

The single-lever sink mixers in the KLUDI TANGENTA line are available with either a swivelling spout, a retractable spout or an adaptable rinser spray.

Whether intense or spray mode, change the type of jet by simply pressing the button on the top of the rinser spray.

The retractable spout extends your range, which is very practical when working at twin sinks or large sink units.

KLUDI MX

Tangible quality

You can feel its high quality. KLUDI MX has a solid, heavy mixer body, which is an indication of high quality and durability. In addition to the chrome mixers, the extended range also offers two choices of colours: high-end finished surfaces in white or mocha are combined with contemporary chrome highlights. The ideal solution for colour sink units in classic and contemporary kitchens.

Convenient and practical

They really impress people at first glance: KLUDI's MX single-lever sink mixers in white or mocha, which are an addition to the chrome range. Their finish gives way to potential new colour schemes at sink units made of light-coloured or dark granite. The coloured mixers are very popular as replacement mixers.

The extensive KLUDI MX range includes single-lever sink mixers to meet the most diverse requirements. The swivelling spout allows you to extend your working radius. The retractable rinser spray has a convenient rocker switch so that you can change from normal volume to spray mode while the water is running.

The KLUDI MX rinser spray has a rocker switch, which allows you to change from intense mode to spray mode while the water is running.

Spray mode is ideal for cleaning pots, pans and plates. There is no need to turn off the water to change mode.

KLUDI L-INE

Consistent linearity

The L for design line identifies the minimalist KLUDI L-INE. It matches the purist appearance of contemporary kitchens perfectly. The KLUDI L-INE single-lever sink mixer with telescopic extension won the Plus X Award in the three categories for high quality, design and function.

KLUDI L-INE with telescopic extension

The KLUDI L-INE single-lever mixer with telescopic extension is ideal for flexible working at twin sinks or free-standing kitchen islands. The swivelling spout can be rotated by 220° and it can be pulled out steplessly by up to 70 mm using the telescopic extension and locked into position. The retractable, high-grade fibre hose can be extended beyond the locked position, giving a reach of 760 mm.

The contact surface has been thermally isolated so that it heats up only very slowly. Enough time to easily fill a larger saucepan with water for instance, which does not need to be put directly under the spout in the sink thanks to the reach of the telescopic extension.

The varied range includes single-lever sink mixers with a swivelling spout that can be rotated through 360°, a multi-connector or bayonet fitting.

The spout can be pulled out steplessly up to 70 mm and locked into position using the telescopic extension. The contact surface has been thermally isolated so that it heats up only very slowly.

The telescopic extension increases your radius, ideal when working at twin sinks or large-scale sink units.

In addition to the telescopic extension, the high-quality fibre hose is also retractable. This increases the reach by another 760 mm.

KLUDI L-INE S

Clean lines,
strong contrasts

KLUDI L-INE S takes up its place on the sink in modern kitchens making an unmistakable design statement. The elegant, matt finish in black or white colour further enhances the appearance of gleaming metallic components. Strong contrasts as an imaginative continuation of the pure chrome mixers are achieved in the slim S-version of KLUDI L-INE – creativity in its finest form.

NEW

Colour. Convenience. Variety.

Chrome/matt black, chrome/matt white – the elegant colouring appears wonderfully even and smooth in the matt finish since the light is not reflected as strongly. The two colour versions of range KLUDI L-INE S are supplemented by two classical chrome single lever mixers.

Characteristic of all four kitchen mixers is their slimline shape. The letter L is continued as design characteristic of the range in a filigree way.

KLUDI L-INE S is equipped with side control which increases KLUDI's VersatilityPlus advantage at the sink. The flow of water and temperature can be regulated accurately and conveniently as usual using the wide lever that is easy to grasp. The spout with a 360° radius provides even greater flexibility at the sink unit.

The side controls are integrated seamlessly into the body of the mixer. The single-piece body of the mixer proves itself as extremely solid and with the operating mechanism a homogeneous unit. The save shank fixing ensures the stable installation on any surface. Quality features that distinguish a premium range of mixer taps like KLUDI L-INE S.

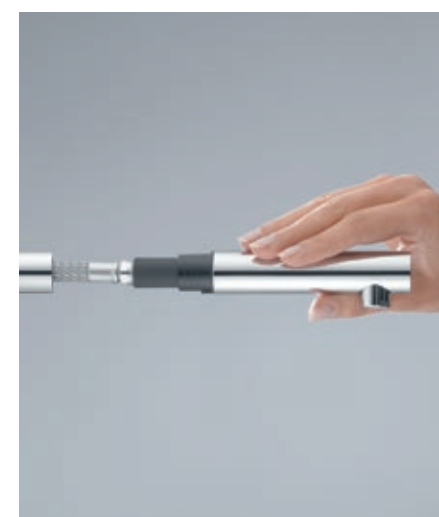

□ chrome/white matt

KLUDI BINGO STAR

Plenty of freedom of movement

The tall, dynamic spout is the trademark of KLUDI BINGO STAR. It can always be swivelled and is even retractable in many of the models. This results in plenty of KLUDI VersatilityPlus for routine tasks handling food and kitchen utensils. Anyone who likes to cook, and does a lot of it, will really appreciate this advantage. In addition to the sweeping lines of the design, the great variety of the range is outstanding. KLUDI BINGO STAR offers the perfect solution to fit any installation conditions.

NEW

One-of-a-kind double-arch design

There are mixers that offer more than functionality. They become objects of interior design – such as the KLUDI BINGO STAR sink mixer with its unique double arch.

The organic style is defined by the double arch with its chrome-plated guide arm and flexible, white hose spout – a creative symbol for the natural flow of water.

The distinctive style of this single lever sink mixer is an expression of a contemporary, casual lifestyle, which is also evident in the kitchen – strikingly different, strikingly individual.

The flexible, white hose spout is easy to remove using the plastic grip. The convenience of 360° swivelling is perfect for modern kitchen designs, like modular kitchen islands for instance.

More room to manoeuvre at the sink when rinsing! The mixer with a greater reach

The retractable rinser spray makes KLUDI BINGO STAR even more versatile: you can pull the hose out up to 20 centimetres and use two different spray types as needed; the hose then retracts smoothly back into the spout of the single lever sink mixer. Once you've tried it, you'll never want to do without it again as it's ideal for cleaning the sink, filling containers and extending the reach for rinsing. To paraphrase: if you can't take a saucepan to the water, then the water will just come to the saucepan!

Pull it out when you need it: the rinser spray extends the rinsing radius for KLUDI BINGO STAR.

Soft and generous: in this position the rinser spray is fast to fill watering cans and saucepans.

Light and sparkling: time to rinse out the sink quickly? One press of the diverter knob is all it takes to activate the spray mode.

Is your sink unit at the window? This fitting can be tipped on its side

An appealing outlook: having the sink at the window means light and quality of life. And thanks to KLUDI, the window can still be opened even if the mixer is fitted immediately in front of it. KLUDI BINGO STAR has a bayonet release for this purpose. This means the mixer can be removed from the base and tipped on its side with a flick of the wrist. And returned to its fixed position just as easily. The bad news: there are no more excuses for dirty windows now.

Practical and out of sight: the bayonet release has been built into the base of the KLUDI sink mixer.

The mixer can be pulled out from the base with just one hand.

Once you've released it, lay the mixer on one side. Then there's no difficulty in opening and closing the window.

KLUDI BOZZ

A matter of pure form

KLUDI BOZZ celebrates the cylinder in its archetypal form. The mixers have been designed from cylindrical bodies, which are in perfect proportion to one another. Reduced to the pure form!

Streamlined design, practical in function

Design and function are the decisive factors when choosing a mixer for the kitchen. KLUDI BOZZ is impressive where both aspects are concerned. The understated use of form blends in well with different styles of kitchen. The retractable spout has been integrated into the cylindrical form so that it extends your working radius at the sink – ideal for modern, modular kitchen islands.

The spout can be swivelled. The fibre hose can also be retracted almost silently.

KLUDI ZENTA

The combination
of circle and rectangle

KLUDI ZENTA focusses on the basic architectural shapes of the circle and rectangle. The streamlined design was only made possible by using an extra-small KLUDI cartridge. KLUDI ZENTA is striking but without dominating its surroundings.

single lever sink mixer DN 10
389739675

Surfaces in chrome or with a stainless steel finish

A gleaming chrome surface or stainless steel finish? KLUDI ZENTA offers both versions. Chrome fits in very well with kitchens that tend to be fitted in a more traditional style. The stainless steel finish matches perfectly in designer kitchens with brushed stainless steel, e.g. fridges, ovens or extractor hoods. The swivelling spout extends the work area at the sink unit. A fine addition: the KLUDI detergent dispenser built into the worktop complements the consistent look of the kitchen.

KLUDI OBJEKTA

Classic and Contemporary

The design is contemporary, with soft shapes, the underlying characteristics remain of architectural clarity. So KLUDI OBJEKTA can be integrated harmoniously into various kitchen designs. Additional four single-lever mixers extend the range and convince with practical solutions. KLUDI OBJEKTA – classic and contemporary in shape and function.

NEW

Extended range with practical solutions

KLUDI OBJEKTA follows the trend for softer design lines: the upper surfaces of the spout and lever are slightly curved. A touch of modernisation, perfectly matched with the straight lines of the body of the mixer.

The expanded range helps to solve various problems in the kitchen. The multiconnector is ideal for connecting dishwashers or washing machines. If the sink unit is right next to the window, the KLUDI OBJEKTA single-lever mixer with bayonet fitting can be removed from the base and laid on its side. Then it is easy to open and shut the window.

The 360° swivel spout increases the operating radius which is an extra advantage that is also provided by the retractable pull-out spout. A switch is integrated into the new, contemporary design. You can switch it from volume jet to spray mode – while water is still running.

Classic and contemporary, convenient and practical, reliable and durable – KLUDI OBJEKTA convinces in both, home and commercial properties.

The KLUDI OBJEKTA pull-out spout with switch which allows you to change from volume jet to spray mode while water is still running.

The spray mode is ideal for cleaning pots, pans and plates. There is no need to turn off the water to change mode.

Traditional and practical

A line in the style of traditional kitchen mixers, which remain very popular to this day. KLUDI KOMET combines a classic appearance with utilitarian functions, which prove their worth in the kitchen every day. These include a retractable spout, the multi-connector for dishwashers or washing machines and the bayonet fitting.

KLUDI TREND0

A facelift for an
established classic

Classic design with modern flair – this is KLUDI TREND0. Soft lines and a smooth transition between the base and the spout create a harmonious look. The slim lever makes it easy to use the mixers and make precise adjustments.

single lever sink mixer DN 15
335740575

Retractable pull-out hand spray with two different types of jet

Pots, pans and plates are easiest to clean using a spray. It can be switched between shower and jet spray mode. The diverter is integrated in the spout. If you want to extend the radius for working, simply pull the spray head out.

The wide variety offered by the KLUDI TRENDO line also includes single-lever sink mixers with multi-connectors for dishwashers or washing machines and a bayonet fitting. There is also a choice of surface finishes: a stainless steel finish or gleaming chrome.

The spray mode is ideal for cleaning saucepans and plates.

You can switch from the spray from shower to jet mode using the diverter on the top of the spout.

The spray head is retractable – resulting in an extended radius for working at twin sinks or large sink units, for example.

KLUDI SCOPE

Small becomes big

It has risen above itself: KLUDI SCOPE uses the clearance space afforded by an additional base. This creates an XL model that is also suitable for large sinks. KLUDI SCOPE blends linear design with great functionality, as demonstrated by the mixers with spouts which have 360° swivel motion or a retractable extension. There is a choice of surfaces with chrome or stainless steel finish.

KLUDI LOGO NEO

The logical choice

Sleek lines and reliable technology are what characterise KLUDI LOGO NEO as a member of the KLUDI family of mixers. The swivelling spout proves to be very practical on twin sinks for example. The single-lever mixers are available as versions for sink units and wall-mounting.

KLUDI TERCIO

In one straight line

Clean, straight lines characterise the new design of the KLUDI TERCIO line of kitchen mixers. The contemporary-style spout lies parallel to the classic operating lever. Another prime feature of the KLUDI TERCIO mixers can be found below the chrome surface: the modern spouts are made of cast brass and are thus extremely high quality. The outsize mixer that is right on trend for large sink units is part of the extended range.

Icons

- 

Multi-connector
Fitting with connection for washing machine or dishwasher. Multi-connector makes turning water supply on or off very convenient.
- 

Low pressure
Fitting suitable for unpressurised storage tanks.
- 

Bayonet connection
Fitting suitable for installation very close to a window. The bayonet connection allows the fitting to be retracted and tilted sideways.
- 

Sensor
Fitting with non-contact operation.
- 

Battery operation
Electronic fitting with battery operation.
- 

Mains operated
Electronic fitting for 230 V AC connection.
- 

Pull-out spout
Fitting with pull-out spout for extended working radius.
- 

Hand spray
Fitting with pull-out hand spray, can be switched over from normal flow to spray mode.
- 

Eco
Saves at least 40 % water.
- 

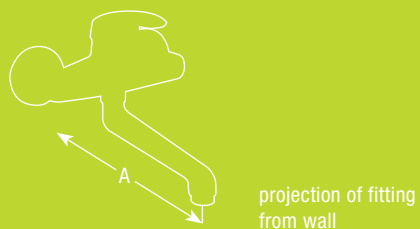

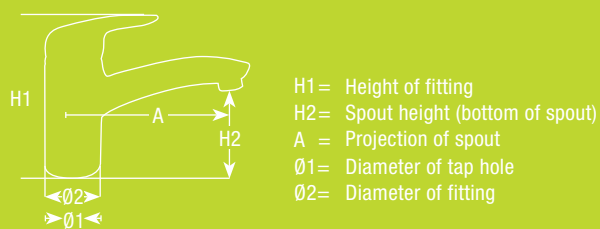

Push-fit connector
It just takes one click to fit the end of the hose to the adapter on the mixer body with the push-fit connector.
- 

KLUDI VersatilityPlus
The KLUDI VersatilityPlus sink mixers with high spout offer practical space between the mixer and sink to meet individual needs.
